JANN GUEST SEATING is available with or without arms in endless finish and upholstery combinations. The special elliptical shaped tubular steel frames add to Jann's remarkable stability and high profile appearance.

The metal framed contoured back has a field removable "jacket type" pull over upholstery for ease of cleaning or replacement. The seat can also be quickly removed from its full perimeter metal support frame.

Jann's light weight, soft curves and rounded corners make this stylish seating piece a delight to handle and move about. It not only gangs but can easily stack in combinations of both arm and armless models.

Overall Dimensions:

Model 630: 32.5H 22W 22D

Model 633: 32.5H 22W 22D

Special size and frame finishes are available where quantities dictate.

THE JANN MOTION CHAIR was designed and engineered to provide an affordable US manufactured management chair that offered superb user comfort from the moment it was sat in while conforming to the shape of that individual's body. It resolved some issues of its pricier counterparts, by incorporating the following improvements:

(A): The usual heavy and abrasive outside structural framework, supporting most of these mesh back chairs, was eliminated to protect the surrounding furniture. Instead, a concealed inner perimeter metal frame provides exceptional back and lower lumbar support via a fitted back or "jacket" suspension system that flexes to the individual's body curvatures.

(B) A superb tension adjustable synchronized reclining system was incorporated, with a minimum number of controls, all within easy reach of the occupant.

(C): Designers and specifiers can choose between the special high grade elastomeric mesh or other fabric, leather and vinyl upholstery options for the back and/or seat.

JANN's simple, clean look, extraordinary comfort and affordable price point makes a strong statement, especially in today's cost conscious market. Add to this her beautiful hardwood trim and finish options, custom size capabilities (predicated on quantity) and companion guest seating and you can see why this new chair collection has created such interest..

About half of Jann's materials contain recycled content and 90 percent (by weight) are recyclable. Here is a quality chair designed to protect surrounding furniture and satisfy today's employees, most of which are now working in smaller spaces.
