

Vardon

Patient/Reception Seating

EOC's new Vardon collection of quality hardwood framed seating responds to clinical requests for added wear and durability in the patient and reception areas. The special extended leg saver design gives added protection to hospital walls.

Vardon also features easy gripping field replaceable steel reinforced urethane armrests and optional recoverable seats and backs. The high resilient foam cushion construction also features an easy cleanout between the seat and back. Vardon meets California's tough CARB standards and is TB133 compatible.
