IMPORTANT NOTICE

NEW SEATING LOAD CAPACITY RATINGS

The EOC price list now includes the approximate maximum static load bearing capacity of each individual seating piece for the benefit of specifiers dealing with obesity issues. It is marked "LOAD" and appears in lbs. along with the product's weight, upholstery yardage and cubic measurements. **Caution:** These measurements reflect the maximum static load weight displaced evenly on the seat of the unit under ideal factory testing conditions, using 25 lb. lead weights. They do not imply that the product will accommodate a person or persons of this weight. For example: A 250 lb. person could quickly break a piece of furniture tested at 450 static load lbs. by "dropping" onto the seat and creating an impact exceeding the static load rating. These new "LOAD" capacity weight measurements are provided for frame support comparison purposes only and are not to be interpreted as a warranty of EOC product performance.
