

## **SAM WINS HCD'10 PEOPLE'S CHOICE AWARD**

Elements of Care's Sam patient chair won the People's Choice Award for best of furniture submissions at the recent Las Vegas' Healthcare Design '10 exhibit at the MGM Grand Hotel. Designed by Charles Gibilterra, the versatile Sam collection introduces the next level in both mid and high back flex-action and reclining chairs for patient care, rest and rehabilitation. Steel reinforced, cam activated soft urethane arms individually flip up and totally out of the way for easy access and egress.

Both the seat and back are available in a variety of upholstery, including the latest anti-microbial and PVC free materials as well as custom woven flex action mesh. Sam's built-in rubber treaded ball bearing wheels mobilize the chair when tilted. The Sam collection includes optional removable headrest covers, ottomans and field replaceable components.

Over 300 attending healthcare professionals participated in the product reviews and voting. Sam was also first runner-up to all healthcare products and services submitted for the show's prestigious People's Award.

Respectfully submitted,
